The Robo-Fairies  
Saved the Seahorse

By Zoe

Once, there was an inventor.  
She made Robo-Fairies!

They built robots together.

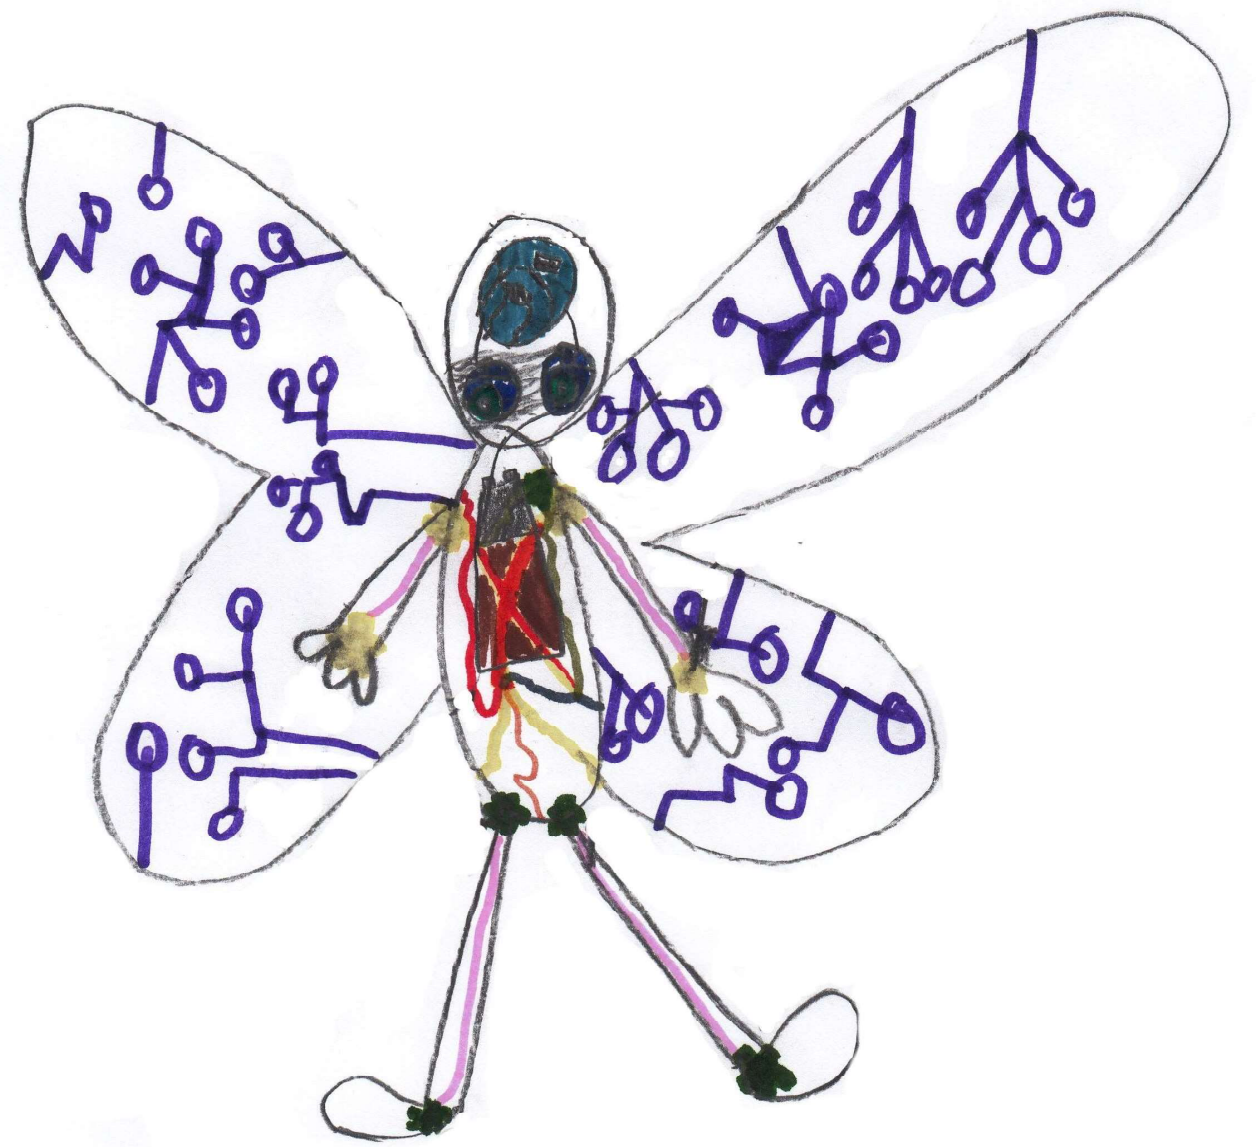

The inventor was testing the  
Robo-Fairies.

The girl Robo-Fairies had  
butterfly wings and the  
boys had dragon wings.

The inventor had a friend  
seahorse. Its name was  
Seahorsie. She lived in a  
pond near a beach.

The seahorse was magical.  
She could change colors.  
When she was green, she  
was happy.

One day, the inventor went  
to the beach and the seahorse  
was pink.

Seahorsie was not feeling  
well!

Something was wrong!

The inventor had an idea.

She called her Robo-Fairies,  
and they cleaned up the  
trash from the pond  
together.

Seahorsie felt better.  
She turned yellow.

But she was still not really  
happy.

5 MINUTES LATER...

The inventor had another idea.

She took a drop of water from the pond and took it to her lab. She looked at it under her purple microscope.

She saw many small dots floating in the water. It was micro plastic!

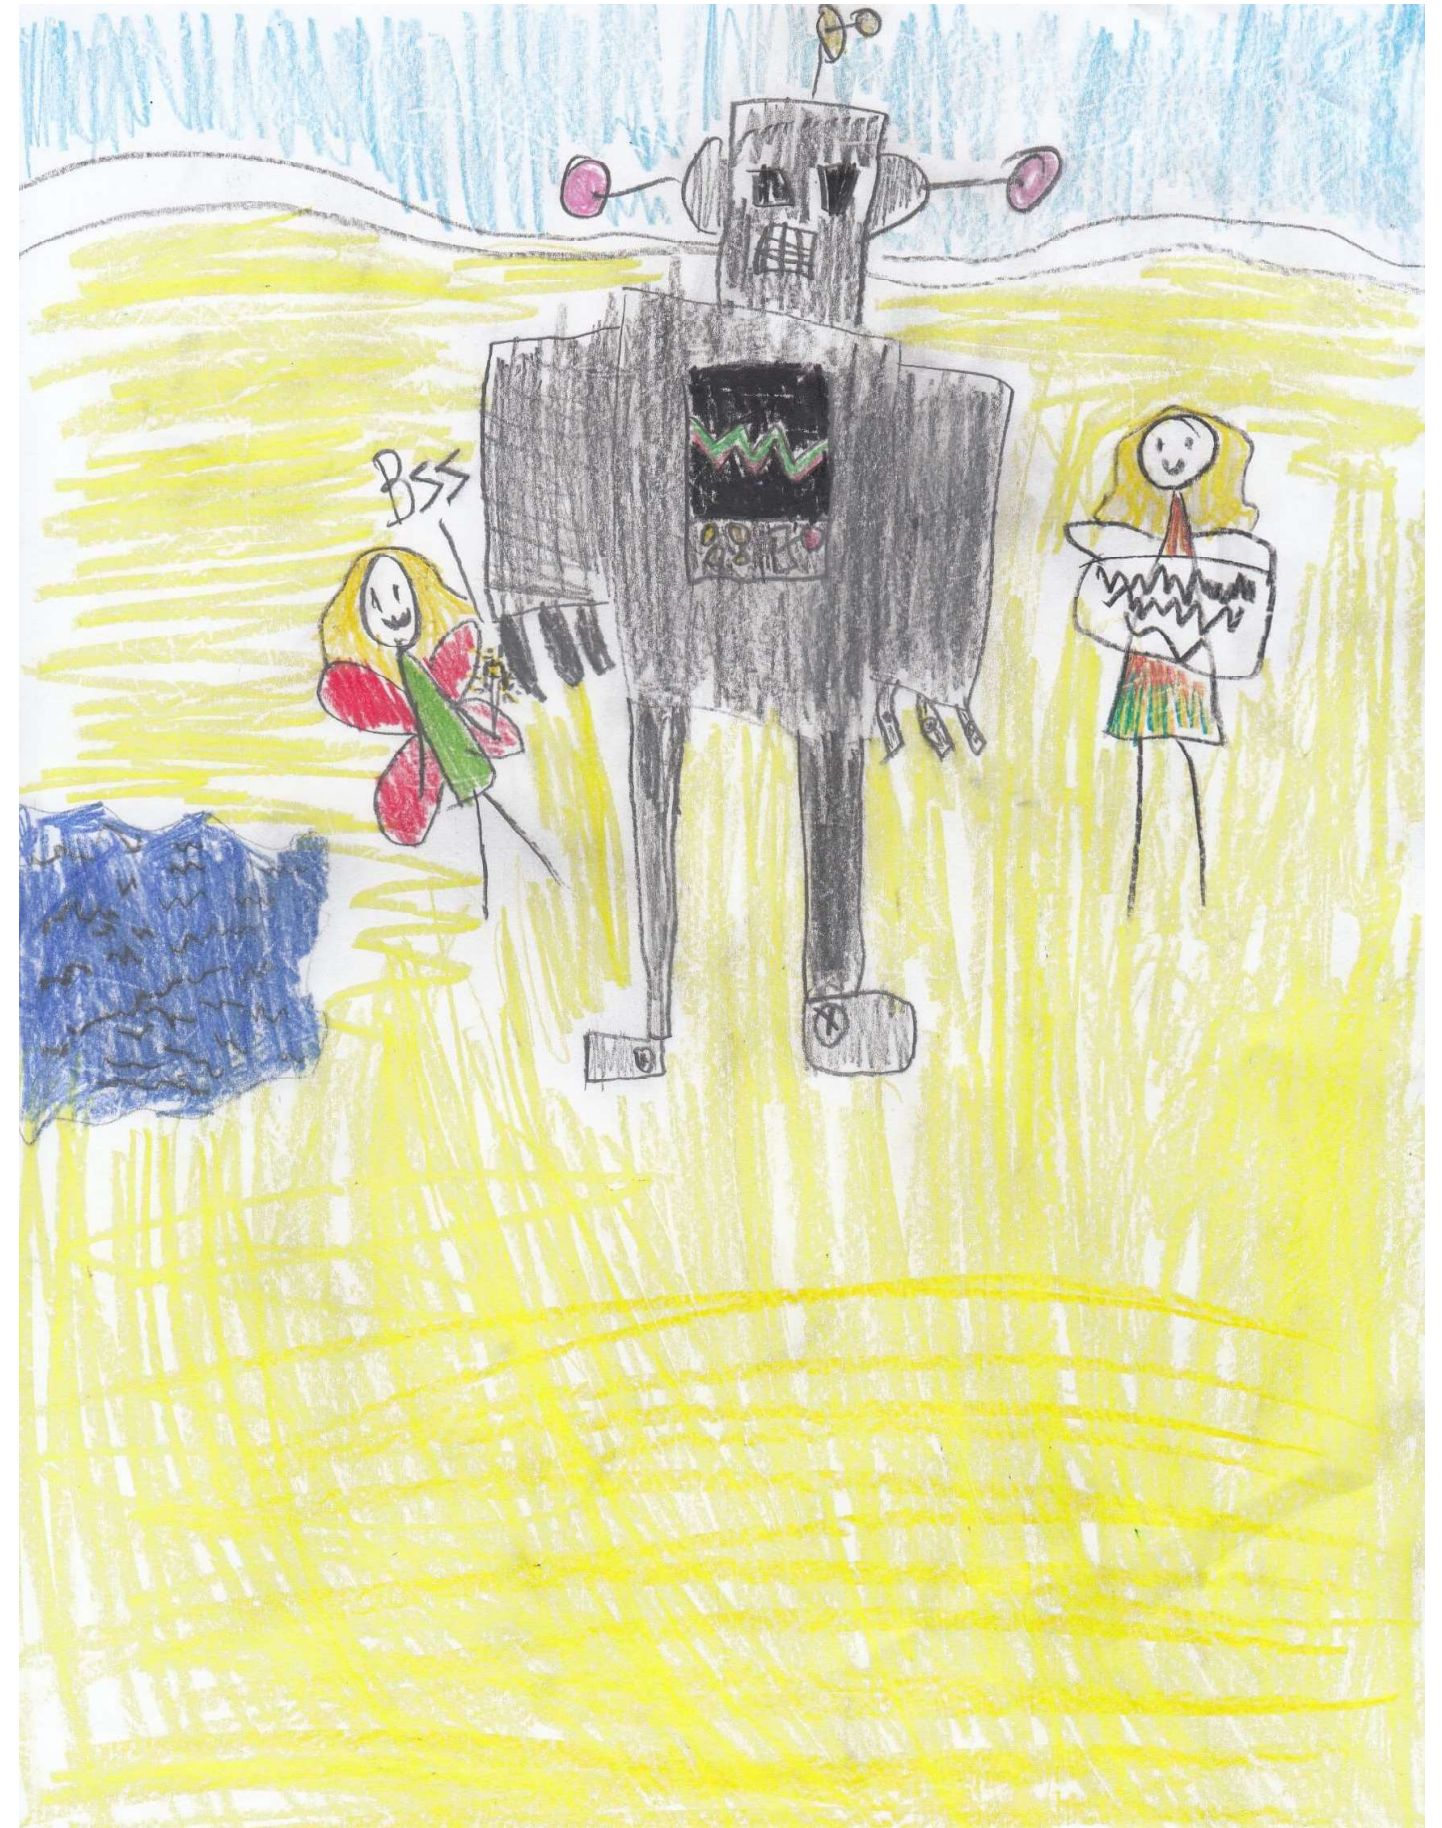

Pond creatures would be sick. She needed to save Seahorsie fast!

The inventor called the Robo-Fairies again.

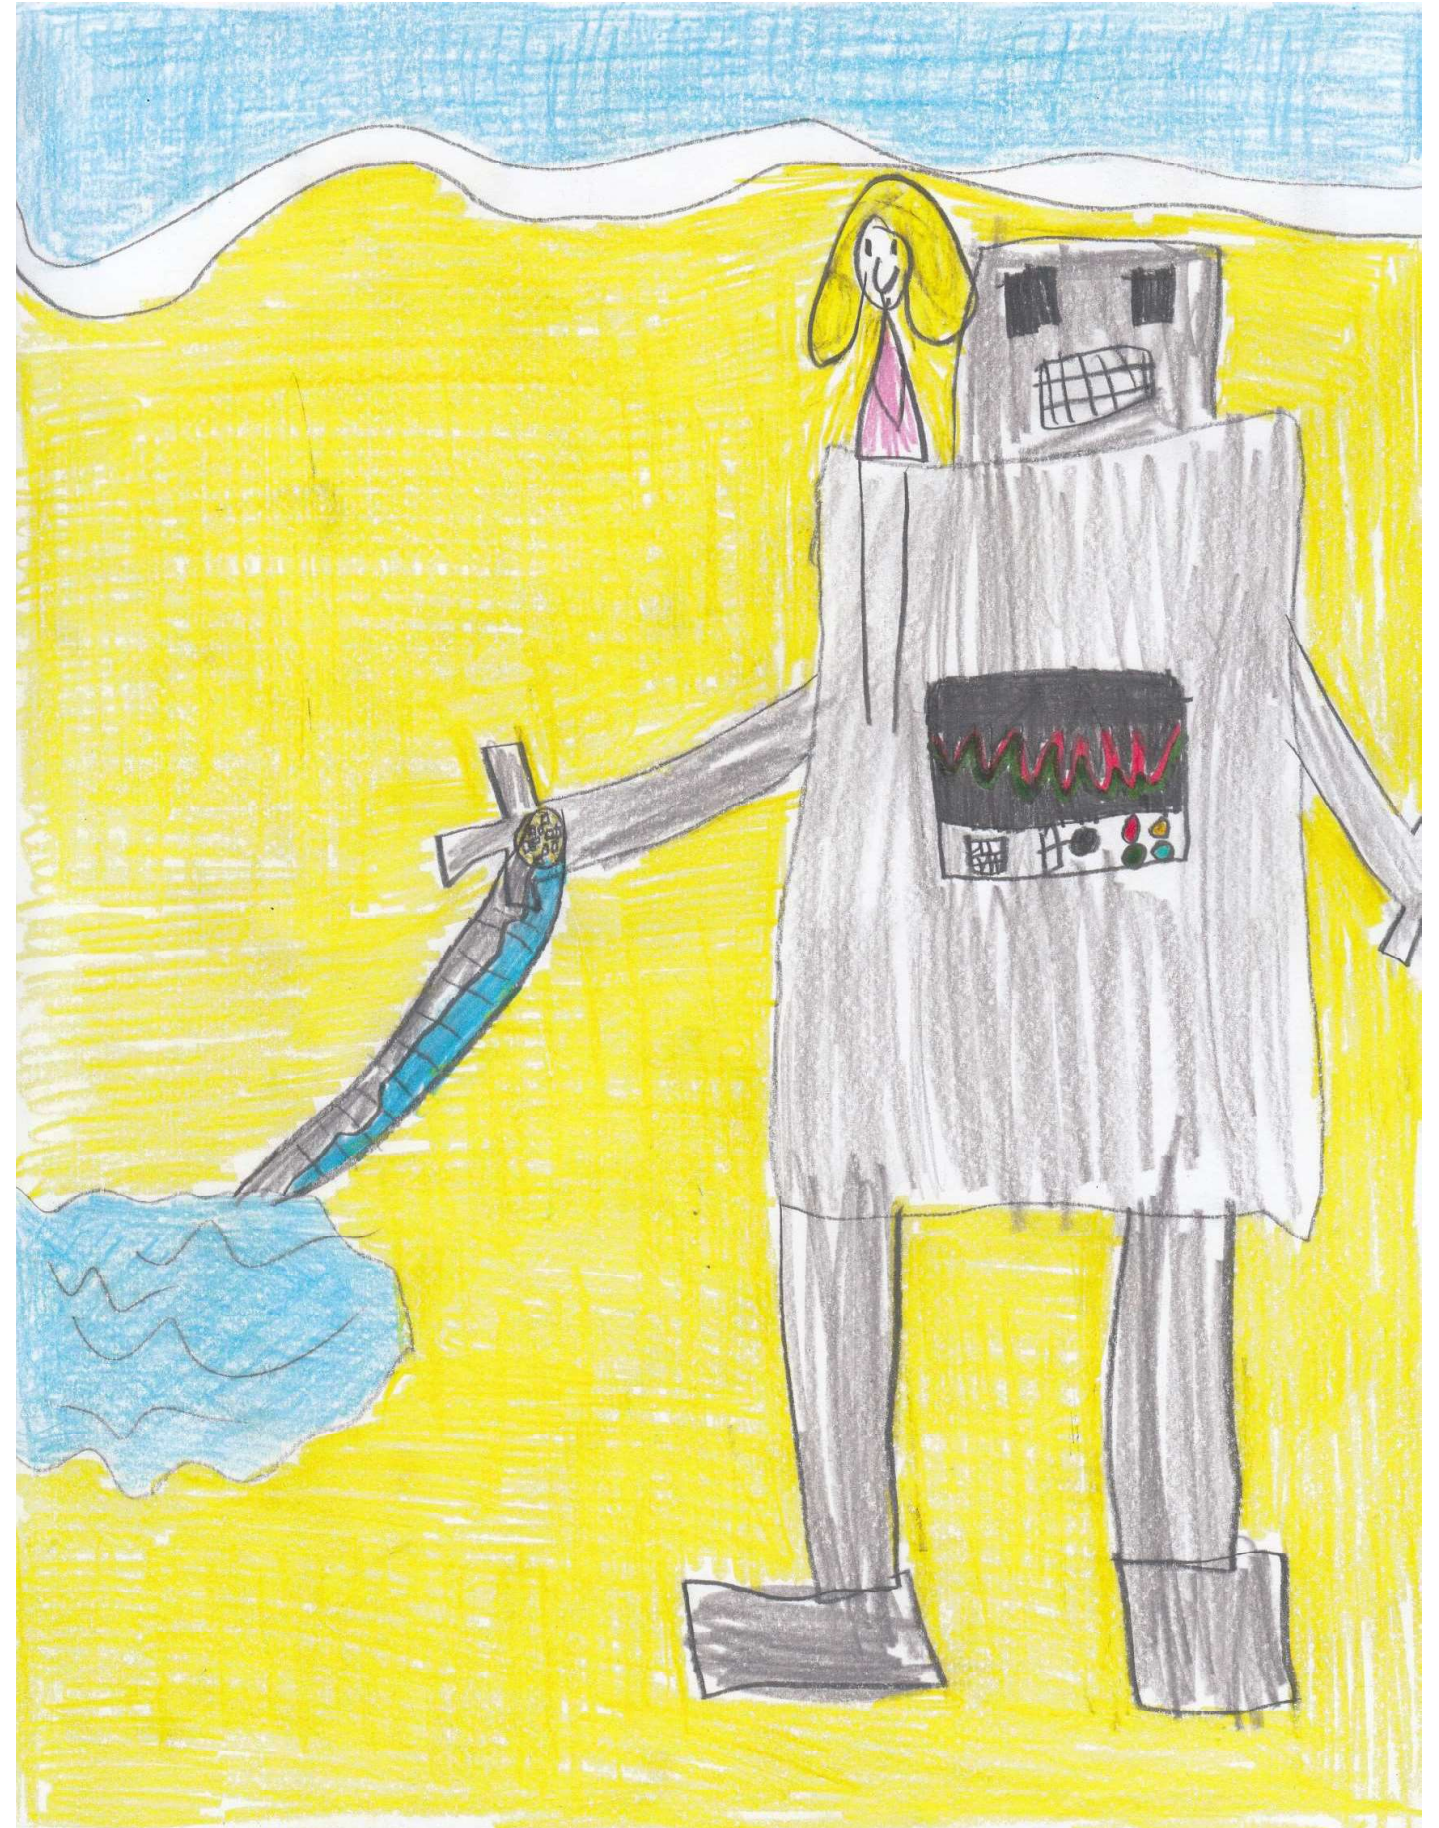

They got the robot.

They added a super-filter to its arms, and a huge tube to suck the water in and out.

The robot walked to the pond  
and cleaned the water!

Seahorsie felt much better.

She was happy.

She turned green again.

The Robo-Fairies saved the  
seahorse!

# The End
